1 Introdução

A SIBS FPS é responsável por efectuar a emissão lógica cartões. A personalização dos cartões (emissão física do cartão) é feita nos Personalizadores. A SIBS FPS envia aos Personalizadores os ficheiros PERS e PINM que contêm dados sobre estes cartões e respectivas cartas de PIN para a personalização.

O ficheiro PERS destina-se a dar suporte à personalização de todos os tipos de cartão emitidos pela SIBS FPS sendo um interface único para a emissão de produtos bancários e produtos não bancários, para qualquer Personalizador que os Emissores contratem. Para além do ficheiro PERS, é enviado o ficheiro para a emissão de cartas de PIN, o PINM, que contém toda a informação necessária à execução de cartas PIN em qualquer Personalizador. Em sentido inverso, é enviado pelos Personalizadores à SIBS FPS, o ficheiro CPER, que contém dados relativos à personalização e expedição dos cartões, ficando estes armazenados na base de dados da SIBS FPS que disponibiliza aos Emissores, a possibilidade de consulta desta informação.

1.1 Enquadramento

Os ficheiros PERS e PINM são produzidos após a recepção e processamento do ficheiro de emissão de cartões ELCB e enviados, em nome dos Emissores, aos Personalizadores com vista à produção física do cartão já gerado logicamente pela SIBS FPS.

O ficheiro PERS visa responder à necessidade de evolução do anterior interface (ficheiro MPEMV) existente para efeitos de personalização em centros alternativos ao universo SIBS FPS, bem como integrar a evolução registada na área de emissão resultante da introdução de produtos *contactless* associados aos sistemas MasterCard e VISA. O ficheiro PERS é enviado aos Personalizadores em conjunto com o ficheiro PINM, que tem como objectivo dar suporte à emissão de PIN.

O ficheiro de emissão de cartas de PIN, PINM, é produzido quando a SIBS FPS recebe o ficheiro ELCB com o objectivo de gerar cartas PIN.

O ficheiro CPER é enviado à SIBS FPS pelos Personalizadores que adiram a esta nova funcionalidade, com informação sobre o resultado da personalização e expedição de cartões, com o objectivo da SIBS FPS poder disponibilizá-la aos Emissores de forma integrada e num interface único. A adesão dos Personalizadores a esta nova funcionalidade não é obrigatória mas é recomendada, de forma a permitir um serviço mais completo e consolidado aos Emissores.

2 Diagrama Funcional Global

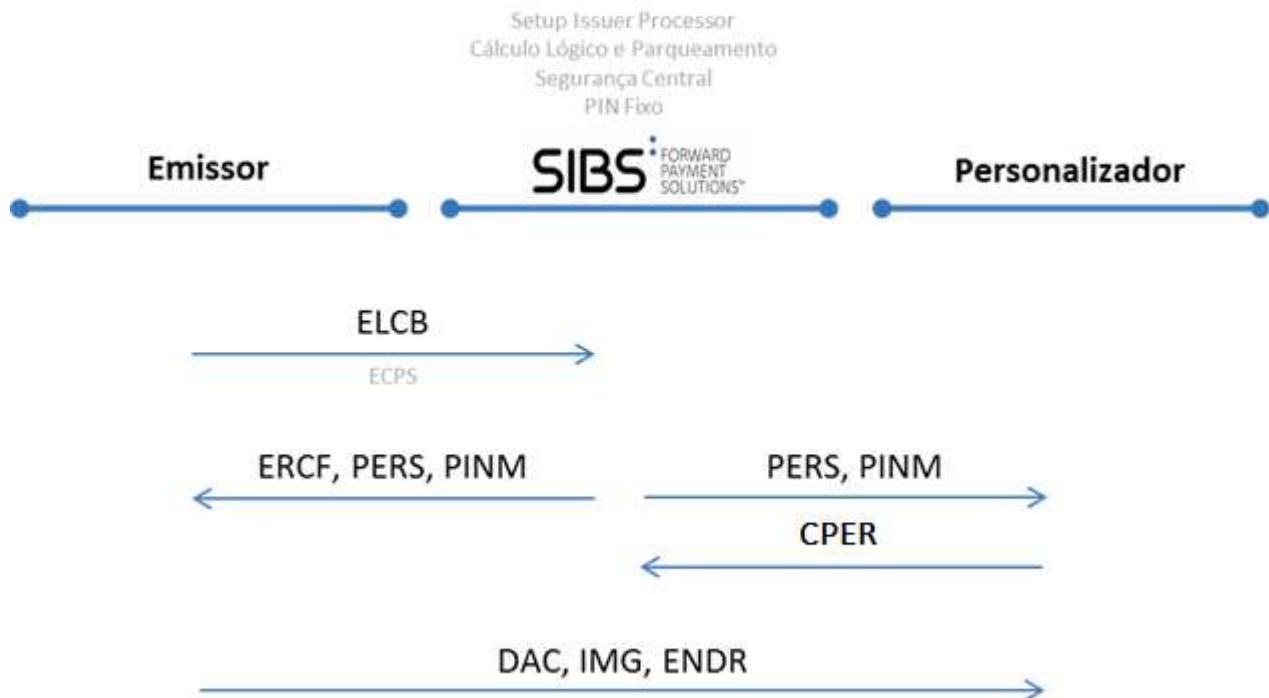

Figura 1 - Diagrama funcional global do fluxo de emissão lógica e física dos cartões e cartas PIN

Legenda:

- ELCB - Ficheiro de Emissão Lógica de Cartões Bancários;
- ECPS - Ficheiro de Emissão de Cartões com Processamento SIBS FPS;
- ERCF - Ficheiro de Erros e Confirmações;
- PERS - Ficheiro de Personalização de Cartões;
- PINM - Ficheiro de Suporte à Emissão de PINs e respectivas Cartas;
- DAC - Ficheiro de Dados Adicionais;
- IMG - Ficheiro de Imagens;
- ENDR - Ficheiro de Dados de Endereçamento;
- CPER – Ficheiro de Resposta ao Ficheiro de Personalização de Cartões.

3 Especificações Técnicas

3.1 Metodologia de Segurança

De acordo com as “*Common Personalization Specification's*”, devem ser estabelecidos canais seguros para o Transporte da Informação contida nos Ficheiros de Personalização.

Para além da segurança das comunicações é necessário proteger a informação ao nível aplicacional. Este documento aborda as especificidades da segurança aplicacional com impacto no Ficheiro de Personalização entre a SIBS FPS e os Personalizadores.

Existe um conjunto de *Transport Keys* (designadas genericamente por TKs) definidas para protecção dos dados do Ficheiro de Personalização e que proporcionam protecção para confidencialidade e integridade.

As TKs estão embebidas no PERS, cifradas por uma ZCMK (de nível superior), a qual é conhecida simultaneamente pela entidade que envia o Ficheiro de Personalização (SIBS FPS) e pela entidade que o recebe (Emissor / Personalizador).

Na **data for perso device** de cada Aplicação *chip* são identificadas as DGIs cifradas por cada TK.

As TKs devem ser conhecidas simultaneamente pela entidade que envia o Ficheiro de Personalização (SIBS FPS) e pela entidade que o recebe (Emissor e/ou Personalizador). Por imposição dos Sistemas de Pagamento, as Chaves de Transporte (ZCMKs) entre SIBS FPS e os Personalizadores são distintas de Emissor para Emissor.

3.1.1.1 Protecção da Confidencialidade

A protecção da confidencialidade dos dados consiste em cifrar a informação crítica no Ficheiro de Personalização.

Existem três categorias de dados que envolvem protecções da confidencialidade com chaves e algoritmos diferenciados.

Tabela 1 - Categorias de dados que envolvem protecções com chaves e algoritmos diferenciados

Categorias	Chave (TK)	Padding	Algoritmo
PINs	KS PIN	ISO PBF 031	ECB
Chaves			
• Chaves 3DES de Cartão	KS KEY	Sem Padding	ECB
• Chaves RSA e constantes CRT	KS KEY	Padding 80[00]*2	ECB

¹ Format 03 da norma ISO 9564 " Banking — Personal Identification Number management and security PIN Block" Format 03.

² Padding method 2 da Norma ISO/IEC 9797-1 Information Technology- Security Techniques - Message Authentication Codes (MACs).

Categorias	Chave (TK)	Padding	Algoritmo
Dados críticos (ex: CVV, PAN e Data de Expiração)			
<ul style="list-style-type: none">MICs com dados críticos	KS CIF	Padding 80[00]*	CBC
<ul style="list-style-type: none">DGIs do MIC de <i>chip</i> com dados críticos	KS CIF	Padding 80[00]*	ECB

A Cifra faz-se por MIC ou DGI no caso dos dados *chip*. Um MIC ou uma DGI protegida por cifra têm todos os dados cifrados com excepção da identificação do MIC ou da DGI, do comprimento e do campo MAC, caso existam.

É necessário ainda garantir que um MIC ou DGI cifrado tenha um número múltiplo de 8 *bytes*. Para tal foram criados os campos de *padding*.

3.1.1.2 Protecção da Integridade

A protecção dos dados para Integridade consiste em, para cada MIC ou Aplicação *chip*, calcular um MAC sobre todo o conjunto dos dados envolvidos.

Algoritmo de cálculo do MAC:

- Calcula-se um valor de *hash*, com o algoritmo SHA-1 de acordo com a norma *Secure Hash Standard* FIPS PUB 180-1, sobre os dados compreendidos entre os seguintes campos:
 - LAPPL (início da Tabela 19), inclusivé;
 - MACkey (final da Tabela 21), exclusivé;
- Calcula-se o MAC sobre o resultado anterior com o *Padding method 2* e algoritmo 3 da norma ISO 9797 fazendo uso da chave KS MAC:
 - Padding method 2* da norma ISO/IEC 9797-1: com 80 e 3x00
 - Algoritmo 3 da norma ISO/IEC 9797-1: *single* DES CBC com excepção do último bloco que é com 3DES.
 - O MAC são os 4 *bytes* mais à esquerda (4 MSB's) do resultado anterior.

Nota: O MAC é realizado ao conteúdo integral do MIC, designação do MIC e dimensão incluídas.

3.1.1.3 Protecção da Confidencialidade e Integridade

Quando um MIC ou uma DGI é protegida quanto à confidencialidade e integridade é necessário definir a ordem pelo qual são aplicados estes mecanismos.

Quem protege deve primeiro cifrar e sobre este resultado calcular o MAC.

Na recepção deve ser validado o MAC sobre o texto cifrado e depois decifrar o texto.

3.2 Ficheiro PERS

O desenho do ficheiro PERS segue de perto as especificações EMV *Card Personalization Specification* (1) e inclui parte da nomenclatura aí utilizada.

A informação nele contida encontra-se compartimentada por MIC's (*Module Identification Code*), sendo estes divididos por linhas distintas no ficheiro. Esta divisão é feita tendo em conta se a aplicabilidade de cada MIC é relativa à produção no seu todo, ou a cada cartão a personalizar. A informação em cada Módulo é composta por:

- MIC (*Module Identification Code*): Identificador do Módulo.
- MIC *length*: Dimensão dos dados relativos ao Módulo.
- MIC *data*: Conjunto de dados relativos ao Módulo.

A estrutura aplicada ao campo MIC é a seguinte:

- Designação do MIC 3 *bytes*; Versão do MIC 1 *byte*; Total 4 *bytes* (a norma prevê de 1 a 7 *bytes*);
- Dimensão do MIC 7 *bytes* (de acordo com a norma);

Nota: a opção de apenas utilizar 4 dos 7 *bytes* possíveis para a designação do MIC tem a ver com a metodologia de segurança a utilizar (descrita em ponto específico) e visa possibilitar a utilização desta quer para os MIC's sujeitos a cifra quer para as TAG's sujeitas a cifra (presentes nas aplicações *chip* e cuja dimensão é de 4 *bytes*).

As figuras seguintes representam a estrutura do Ficheiro de Personalização de acordo com a metodologia referida.

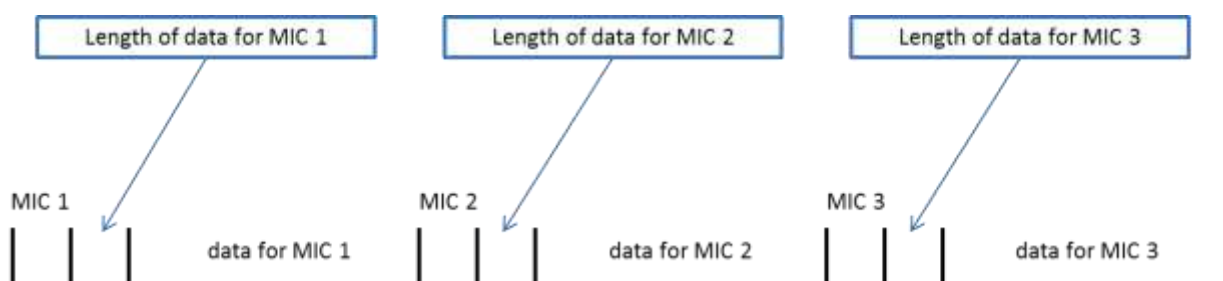

Figura 2 - Estrutura do Ficheiro de Personalização de Cartões - ficheiro PERS

En - Length of data group #n data;

Fn - Value of data group #n data.

A estrutura do registo detalhe, mesmo quando este não é relativo a dados de chip, tem também como base o EMV CPS v1.1. Dentro de cada registo de detalhe, os diferentes dados remetidos estão divididos por MIC correspondendo estes às várias componentes da Personalização do Cartão. Assim, para cada cartão a personalizar existe um conjunto de registos ordenados de forma sequencial (dois ou três consoante o cartão tenha *chip* ou não):

- Um registo de Identificação de Cartão;
- Um registo Personalização Dados não *Chip*;
- Um registo de Personalização Dados *Chip* (se aplicável).

O número de registos de cada um dos tipos de detalhe é igual ao número de cartões a personalizar.

Esta estrutura, em que se divide a informação de cada cartão por diferentes linhas, pretende por um lado minimizar o tamanho máximo de cada registo, e por outro estruturar os dados de forma a facilitar a respectiva manipulação.

O tamanho máximo do registo é variável pois depende do número de aplicações que o *chip* contém.

A organização do ficheiro PERS obedece ao seguinte desenho:

- Um registo (ou linha) de inicialização (*header*);
- Um registo (ou linha) de Parâmetros da Produção;
- Um registo (ou linha), por cartão, relativa à Identificação do Cartão e às características da personalização;
- Um registo (ou linha), por cartão, relativa à Personalização Dados não *Chip* (gráfica, pistas magnéticas, envelopagem, etc.);
- Um registo (ou linha), por cartão, relativa à Personalização Dados do *Chip* e respectivas aplicações;
- Um registo (ou linha) de finalização (*trailer*).

Quadro resumo da estrutura:

Tabela 2 - Quadro resumo da estrutura do ficheiro PERS

- C) Formato: AAAAMMDDSSS.

3.2.2 Registo de Parâmetros da Produção

O registo Parâmetros de Produção contém o *setup* de informação relativa à produção a que este respeita, e as chaves de segurança aplicáveis à informação presente no ficheiro. Este registo é composto por quatro (4) MIC (Módulos):

- Módulo de Parâmetros - MIC PAR
- Módulo Contentor de Produção - MIC CTP
- Módulo *Template* Chaves - MIC CHV
- Módulo *Format Keys* - MIC FTK

Este registo inicia-se pelo módulo PAR.

3.2.2.1 Módulo de Parâmetros - MIC PAR

Tabela 4 - Módulo de Parâmetros - MIC PAR

MIC	PAR1				
LENGTH	0000045				
Nº	Sigla	Nome	Comp.	Rep.	Obs.

A) Formato: AAAAMMDDSSS.

Nota: Quando o indicador de urgência indicar que se trata de uma produção prioritária o nome externo do ficheiro (ao nível do file transfer) faz referência a tal, sendo então "PERSU".

3.2.2.2 Módulo Contendor de Produção - MIC CTP1

O MIC CTP apresenta a informação combinada entre o Emissor e o Personalizador relativa às características da personalização a que o ficheiro respeita. Este não é alvo de processamento pela SIBS FPS, pelo que se trata de uma transposição directa do ficheiro de emissão.

Tabela 5 - Módulo Contendor de Produção - MIC CTP

LENGTH	0000050				
Nº	Sigla	Nome	Comp.	Rep.	Obs.
4285	EXT_INFPRS	Info para o Personalizador (Parâmetro)	50	A	A)

A) Contendor parâmetros.

3.2.2.3 Módulo Template Chaves - MIC CHV

O módulo CHV é um repositório de chaves de cifra do Ficheiro, com a indicação da respectiva identificação, para que estas possam ser usadas para a protecção das diversas estruturas.

Este módulo identifica primeiro a chave ZCMK, partilhada entre o Emissor e o Personalizador, chave que protege as restantes chaves de transporte.

A restante informação presente no módulo é constituída pelo conjunto de chaves de transporte, cada uma antecedida pelo identificador pela qual é referenciada a chave.

Tabela 6 - Módulo Template Chaves - MIC CHV1

MIC	CHV1			
LENGTH	0000124			
Nº	Sigla	Comp.	Rep.	Observações

3.2.2.4 Módulo Format Keys - MIC FTK

O módulo FTK é uma estrutura que define quais os MIC's que estão protegidos, de que modo, e com que chaves de Cifra Cartão.

Este MIC é constituído por quatro estruturas de "formatos de protecção". Estas estruturas são uma adaptação das que são definidas pelo *standard* EMV CPS para protecção das DGL's do módulo *chip*. A adaptação vai no sentido de definir quais os MIC's que estão protegidos por cada mecanismo de protecção.

A primeira estrutura de "formato de protecção" define a protecção de confidencialidade definindo:

- A identificação da chave;
- O tipo de protecção;
- O algoritmo;
- A lista de MIC's ao abrigo desta protecção.

A segunda estrutura define, de uma forma similar, a protecção de integridade.

A configuração actual pode vir a ser adaptada no futuro.

Tabela 9 - Módulo Format Keys - MIC FTK

MIC	FTK1

(*) Dimensão igual ao Nº MIC's x 4 bytes.

3.2.3 Registo de Identificação de Cartão

O registo de Identificação do Cartão é composto por três MIC's que contêm a informação necessária para a identificação do cartão, e que definem as características da personalização/expedição combinadas entre o Emissor e o Personalizador.

Este registo inicia-se pelo módulo IDE, que transporta uma chave do registo original (chave alternativa ao PAN e não cifrada) para efeitos de emparelhamento de dados adicionais, ou de selecção de registos para uma eventual necessidade de reordenação.

Existem tantos registos de Identificação de Cartão quantos os cartões a personalizar.

3.2.3.1 Módulo Identificação do Registo - MIC IDE

- A) Contentor Cartão.

3.2.4 Registo Personalização Dados não *Chip*

O registo de personalização de cartão - Dados não *Chip* - inclui a informação gráfica, as pistas magnéticas, e os dados de endereçamento se estes não forem remetidos de forma individualizada.

É assim composto por quatro MIC's, cifrados (MIC GRF1, MIC PST1, MIC CNT1 e MIC END1), e inicia-se pelo MIC GRF1.

Existem tantos registos de personalização de cartão, quantos os cartões a personalizar.

3.2.4.1 Módulo Personalização Gráfica - MIC GRF1

C) Valor: '800000000000'.

Observação: Só é cifrado se for apresentado esse requisito.

3.2.4.4 Módulo Personalização Envelopagem - MIC END

Este módulo contém o conjunto de dados de endereçamento recepcionados via ficheiro de emissão (ECPS; ELCB) para efeitos de expedição. Estes não são alvo de qualquer processamento pela SIBS FPS, pelo que se trata de uma transposição directa.

Caso o Emissor opte por remeter estes dados directamente ao Personalizador este módulo não faz parte do ficheiro de personalização dado que não são recepcionados no ficheiro de emissão.

Tabela 16 - Módulo Personalização Envelopagem - MIC END

	PADDING		6	H	A)
7752	CHV_MACMIC		8	H	

A) Valor: '800000000000'.

3.2.5 Registo Personalização - Dados *Chip*

A estrutura de dados no interior do MIC *Chip* respeita as especificações CPS (1), (4) e (12). Mesmo assim, optou-se por detalhá-la nas secções seguintes deste documento, pois isso permite identificar quais os campos que serão efectivamente utilizados e quais os que irão ser preenchidos com valores nulos (respeitando apenas a estrutura).

A estrutura do MIC *Chip* divide-se em:

- *Header MIC Chip*:
 - Dados comuns às várias Aplicações *chip*.
- *Data for chip card appl*:
 - Dados específicos para cada uma das aplicações existentes no *chip*. Por exemplo:
 - VISA / VISA ELECTRON;
 - MasterCard / Maestro;
 - AMEX;
 - CAP / DPA;
 - MB;
 - (outras);

Para cada Aplicação *Chip* (*Data for chip card appl*) pode ainda sub-dividir-se em:

- *Data for perso device*:
 - Dados/Instruções de Processamento para o Programa de Personalização.
 - Não para serem escritos no Cartão-*Chip*.
- *Data to be logged*:
 - Indicação dos Dados a retornar da Personalização para esta Aplicação. Não se prevê utilizar esta estrutura nesta versão da especificação, sendo os Dados a retornar da Aplicação definidos localmente no *Setup* dos Equipamentos de Personalização.
- *Data to be sent to the chip card*:
 - Dados a serem efectivamente gravados no *chip* para cada Aplicação.
 - MAC *data*: sobre os Dados a gravar no *chip* para cada aplicação é calculado um MAC, que no Ficheiro PERS se coloca imediatamente a seguir aos referidos dados, em conjunto com a Chave utilizada para cálculo desse MAC. Esta Chave vem Cifrada pela Chave de Transporte ZCMK.

Tabela 17 - Estrutura do MIC *Chip*

Header MIC <i>Chip</i>			
	Section 1		
	Section 2		
Data for <i>chip card appl #1</i>			
Data for <i>chip card appl #2</i>			
	data for perso device	Section (2+n)	
		Section (2+n) a1	
		Section (2+n) a2	
	data to be logged		
		Section (2+n) b	
	data to be sent to the chip card	Section (2+n) c	
		Processing Steps data	
		DGI Grouping	
		Section (2+n) d	
		MAC data	
Data for <i>chip card appl #3</i>			

3.2.5.1 Header MIC *Chip*

O *Header MIC Chip* contém os Dados que são comuns às várias Aplicações *Chip*:

- **VNL**: Versão do Formato de Registo DETALHE ((2) e (4) e (12)).
- **CRN** - RID (*Registered Application Provider Identifier* - Identificador do Fornecedor da Aplicação Registrada) das aplicações mais prioritárias.
- **STATUSCOLL** - RFU (*Collator Status*)
- **NUMBERPID** - Número de IDVCs identificadores do perfil.
- **AIDs** - AIDs das Aplicações EMV (incluindo sufixos se existirem).

Tabela 18 - Detalhe *Header MIC Chip*

Header MIC Chip						
Section 1	Name	Dim.	Form.	Cont.	Description	
	MIC Chip	4	ASCII	descrito nas secções anteriores deste documento.	Module Identification Code do Chip	
	LCCA	7	ASCII		Length for IC Card Application Data	
Section 2	Name	Dim.	Form.	Cont.	Description	
	VNL	4	ASCII	"02.2"	Version Number of this Layout	
	LDATA	2	H		Length from LHDR	
	LHDR	2	H		Length of Header Data for ICC Applications	
	LCRN	2	H	"0005"	Length of the CRN (CAMS Reference Number)	
	CRN	5	H	RID	RID (Registered Application Provider Identifier) of more Priority Application.

	AIDi (*)	5-16	H		AID for Application #i (including the Sufix, if it exists)	

(*) Estes campos repetem-se COUNTAID vezes.

3.2.5.2 Data For Perso Device

Contém, para cada Aplicação *chip*, dados e instruções de processamento destinados ao funcionamento do programa de personalização. Não são para serem gravados no Cartão:

- **AID** dessa Aplicação *chip* (incluindo o Sufixo, se existir).
- **TKDATA**: Identificação das TKs envolvidas para essa Aplicação.
- **IDOWNER**: Proprietário da especificação dessa Aplicação. VISA, MasterCard.
- **PS (Processing Steps)**. Embora a especificação CPS preveja outros, apenas se utiliza o *Processing Step "Personalisation" ("EF")*.
- **PDI (Processing Device Instructions)**. Informação de Controlo. Não se prevê usar esta estrutura nesta versão da especificação.

Notas:

- Os campos IDTK identificam as KS (Chaves de Sessão) utilizadas sobre as DGLs;
- Estes identificadores das KS estão contidos também no Módulo CHV (CHAVES DE CIFRA DO FICHEIRO);
- A estrutura dos IDTK das KS está descrita antes, junto ao Módulo CHV;
- *Data To Be Logged* (Para cada Aplicação *chip*);

Contém dados a retornar da personalização para esta aplicação. Nesta versão da especificação não se prevê utilizar esta estrutura.

3.2.5.3 Data to be logged**Tabela 20 - Ficheiro PERS - Data to be logged**

data to be Logged						
	Section (2+n)b	Name	Dim.	Form.	Cont.	Description
		LLOGDATA	2	H	"0000"	
		LOGDATA	0	H		No LOG DATA

3.2.5.4 Data To Be Sent To The Chip Card

Nesta secção do Ficheiro de Personalização são colocados, para cada aplicação:

- Dados para o *Processing Step* Personalização, ou seja, os Elementos de Dados a gravar efectivamente no *Chip* para essa Aplicação.
- Nesta especificação é apenas considerado o *Processing Step* Personalização.

Todos os Elementos de Dados a gravar no *chip* estão agrupados em estruturas designadas por **DGI (Data Group Identifier)**. Cada DGI é composto por:

- DGI *Identifier*.
- DGI *Length*.
- DGI *Data*.

Tabela 21 - Ficheiro PERS - *Data To Be Sent To The Chip Card*

data	to be	sent to chip					card
	Section (2+n)c	Name	Dim.	Form.	Cont.	Description

		DGI Data Group #n					
		Len Data Group #n					
	Val Data Group #n						
	Section (2+n)d	Name	Dim.	Form.	Cont.	Description	
		LMACDATA	1	H	“14” (20decimal)	Dimensão de MACkey + MAC	
		MACkey	16	H		Chave com que o MAC foi calculado. IDTK4 da estrutura FORMATTK, que por sua vez corresponde à KSMAC existente no MIC CHV.	
	MAC	4	H		1ºs 4 bytes do MAC		

3.2.5.5 DGIs

Nesta secção identificam-se as DGIs que são necessárias para a personalização de cada uma das aplicações que o *chip* pode conter. É referida a combinação de DGIs a considerar para cada aplicação no *chip*. São também descritas regras para construção das DGIs.

Para os elementos contidos nas várias DGIs deve ter-se em atenção:

- Na coluna "Conteúdo", podem considerar-se os valores indicados para a *Tag* e o *Length* do Elemento. Para o preenchimento do *Value*, os valores são ilustrativos, podendo na pratica os valores a enviar serem outros;
- A coluna "Dim" indica a dimensão em *bytes*;
- Regras para construção das DGIS.

Os Elementos de Dados EMV a escrever no Cartão-*Chip* para uma Aplicação EMV estão agrupados em DGIs. A Construção dessas DGIs deve obedecer a um conjunto de regras, recomendadas em (2).

Para além destas, foram definidas adicionalmente as seguintes regras para a construção das DGIs, cobrindo os seguintes aspectos:

- Gamas definidas e reservadas para as DGIs.
- Unicidade do PIN.
- Ordem das Aplicações EMV.

3.2.5.5.1 Gamas definidas e reservadas para as DGIs

Foram atribuídas gamas para a Identificação das DGIs, de acordo com as especificações internacionais (1), (4) e (12), e de acordo com o tipo de DGI.

Tabela 22 - Gamas definidas e reservadas para as DGIs

DE	... A	SIGNIFICADO	ATRIBUIÇÃO por
00 00	00 61	Identificação de DGIs contendo elementos de Dados a escrever em Ficheiros de Records do cartão.	(1)
00 62		Reservado.	(1)
00 63	00 CE	Identificação de DGIs contendo elementos de Dados a escrever em Ficheiros de Records do cartão.	(1)
00 CF		Reservado.	(1)
00 D0	1F FF	Identificação de DGIs contendo elementos de Dados a escrever em Ficheiros de Records do cartão.	(1)
20 00	7F 00	Identificação de DGIs contendo elementos de Dados a escrever em Ficheiros internos do cartão.	SIBS FPS
7F 01		Reservado.	(1)
7F 02	7F EF	Identificação de DGIs contendo elementos de Dados a escrever em Ficheiros internos do cartão.	SIBS FPS
7F F0	7F FE	Reservado.	(1)
7F FF	8F 00	Identificação de DGIs contendo elementos de Dados a escrever em Ficheiros internos do cartão.	SIBS FPS
8F 01		Reservado.	(1)
8F 02	9F 5F	Identificação de DGIs contendo elementos de Dados a escrever em Ficheiros internos do cartão.	SIBS FPS
9F 60	9F 6F	Reservado.	(1)
9F 70	EF FF	Identificação de DGIs contendo elementos de Dados a escrever em Ficheiros internos do cartão.	SIBS FPS
F0 00	F0 FF	Identificação de DGIs especiais. Contém TKs.	SIBS FPS
F1 00	FE FF	Reservado para uso Futuro.	SIBS FPS
FF 00	FF FF	Reservado para uso exclusivo das aplicações de Personalização.	SIBS FPS

3.2.5.5.2 Unicidade do PIN

Do lado das aplicações de Emissão no host da SIBS FPS:

- Assume-se que o PIN *Offline* é comum a todas as Aplicações EMV.
- Cada Aplicação EMV traz sempre as DGIs relativas ao PIN *Offline* ("8010" e "9010"), que vêm replicadas (com o mesmo PIN) para cada uma das Aplicações EMV.

Do lado das aplicações no Personalizador:

- Assume-se que as DGIs do PIN *Offline* estão sempre presentes para cada uma das Aplicações EMV.
- É através das CVM *Lists* que se determina se o PIN *Offline* é ou não escrito no *chip*. Não é escrito se nenhuma das CVM *Lists* relativas às aplicações EMV contiver o PIN *Offline* como método de CVM.
- Sendo o PIN *Offline* comum às várias Aplicações, ele só é escrito uma única vez, na raiz do *chip*. O valor do PIN a gravar pode ser obtido a partir da informação que vier para qualquer das Aplicações EMV (embora normalmente se utilize o PIN da primeira).

3.2.5.5.3 Ordem das Aplicações EMV

A aplicação MULTIBANCO deve ser sempre colocada após as aplicações dos sistemas de pagamento internacionais, caso estas existam, não podendo ser a única.

3.2.5.5.3.1 A aplicação CAP/DPA, caso exista, deve ser sempre a última da sequência, não podendo ser a única. Ver DGIs a utilizar para a versão 1 do ficheiro PERS

Tabela 23 - Tabela de Combinação de DGIs

Factores que condicionam a existência das DGIs

A combinação de DGIs a utilizar para cada cartão depende de vários factores, traduzidos nas colunas da Tabela de Combinação de DGIs.

1. AID (Sistema de Pagamento e Aplicação dentro deste):
 - a. Sistema de Pagamento: VISA, MasterCard, AMEX, MB;
 - b. Aplicação:
 - i. Pagamento: VISA, Electron, MasterCard, Maestro, AEIPS;
 - ii. Autenticação: CAP, DPA;
2. Tecnologia do Cartão:
 - i. SDA: Autenticação estática dos dados do cartão;
 - ii. DDA: Autenticação dinâmica dos dados do cartão;
 1. Designa-se por fDDA no *PayWave* e CDA no *PayPass*.
3. Modo (interface entre o cartão e o terminal):
 - i. *Contact-Only* (cartões contacto convencionais);
 - ii. *Contact-Mode* (modo contacto de um cartão *PayPass/PayWave*);
 - iii. *Contactless-Mode* (modo sem contacto de um cartão *PayPass/PayWave*);

4. Outros factores:

- i. Versão da Aplicação, dentro do Sistema de Pagamento. VIS 1.4.0 , M/Chip 4
- ii. Existência ou não de *Offline PIN* no *chip* (contacto).
- iii. Caso exista, o *Offline PIN* ser ou não Cifrado.
- iv. No caso de existir *Offline PIN* Cifrado & DDA, utilização ou não de Chaves RSA dedicadas ao *Offline PIN*.

Outras Considerações

- As DGIs relativas a ICC PIN *Encipherement* são utilizadas apenas se existir *Offline Enciphered PIN* no *chip*, e se este não partilhar a segurança com o DDA. Nesta versão da especificação não se usam estas DGIs.
- Algumas DGIs contêm Elementos de Dados Opcionais, que podem (mediante determinadas condições) não estar presentes nessa DGI.
- De acordo com (1), todas as DGIs começadas com “8” são cifradas.
- Na tabela não são indicadas DGIs para a aplicação MULTIBANCO. A aplicação MULTIBANCO num dado cartão herda a combinação de DGIs da aplicação internacional com a qual vai conviver nesse cartão.
- No caso dos cartões para o Sistema de Autenticação Forte sem funcionalidades de pagamento, a aplicação MULTIBANCO é suportada na combinação de DGIs relativa ao sistema de pagamento VISA e a aplicação de autenticação na combinação de DGIs da aplicação DPA.

3.2.5.5.4 Determinar DGIs a Utilizar

Para além de dependerem do SPI, do tipo de tecnologia do chip, das funcionalidades do cartão, as DGIs a utilizar no envio do ficheiro PERS dependem também da versão do ficheiro PERS que está a ser enviada.

O surgimento de uma nova versão PERS (v2) vem na sequência da necessidade de adaptação da disposição da informação contida no *chip* para novas funcionalidades e serviços. Os Personalizadores recebem a versão 2 do ficheiro PERS caso os cartões sejam:

- *contactless* não personalizados ou *instant issuing*, das marcas VISA/VISA Electron DDA e MasterCard/Maestro DDA;.
- EMV (*contact only*) *instant issuing*, das marcas MasterCard/Maestro DDA.
- AMEX EMV com DDA na componente contacto.

Para todos os outros cartões deve continuar a ser usada a versão 1 deste ficheiro.

As DGIs utilizadas em cada uma das versões estão especificadas a partir da secção seguinte.

Para determinar quais as DGIs a utilizar:

1. Identificar as aplicações a gravar no *chip*. Para este efeito, a componente *Contactless* é considerada independente da componente *Contact*.
2. Seleccionar na Tabela de Combinação de DGIs as colunas correspondentes a essas aplicações *chip*.

3. São consideradas as DGLs das linhas que estiverem assinalada com \surd , em pelo menos uma dessas colunas. Se na mesma linha a DGL estiver assinalada em mais do que uma das colunas, é considerada apenas uma vez.

Ver exemplos das diferentes combinações possíveis no Anexo A.

3.2.5.5.4.1 DGIs a utilizar para a versão 1 do ficheiro PERS

3.2.5.5.4.2 Layout das DGIs - PERS v1

Na tabela seguinte é detalhada a composição de cada uma das possíveis DGIs.

Os elementos de dados que formam as DGIs podem decompor-se em:

- **TLV:** *Tag*, *Length* e *Value* do Elemento. Caso dos elementos de dados simples.
- **TL:** Só *Tag* e *Length*. Caso dos elementos de dados compostos por outros Elementos.
- **V:** Só *Value*. Caso dos elementos de dados que não têm *Tag* atribuída em (1), (7), (10) e (19).

Em qualquer dos casos, cada componente (T, L ou V) ocupa uma linha na tabela.

Para cada componente do Elemento de Dados, é indicado:

- **Nome.** De acordo com (1), (4) e (12).
- **Dim (Dimensão).** Dimensão efectiva (em caracteres) com que o Elemento vem no Ficheiro de Personalização. n1-n2 representa um intervalo. n3 n4 representa 2 valores possíveis.
- **Form (Formato). Formato dos dados no Ficheiro PERS:**
 - **ASCII:** representação ASCII do texto.
 - **Binary:** Varia entre "0" e "9", "A" e "F".
 - **H - Hexadecimal:** Varia entre '0' e '9', 'A' e 'F'.
- **Req (Requisito). Presença do elemento na DGI:**
 - **M: Mandatório.** Elemento sempre presente na DGI (quando esta exista).
 - **O: Opcional.** O elemento pode não estar presente na DGI.

Conteúdo. Os valores apresentados nesta coluna devem ser considerados como informativos.

3.2.5.5.4.4 Layout das DGLs - PERS v2

Na tabela seguinte é detalhada a composição de cada uma das possíveis DGLs.

Os elementos de dados que formam as DGLs podem decompor-se em:

- **TLV:** *Tag*, *Length* e *Value* do Elemento. Caso dos elementos de dados simples.
- **TL:** Só *Tag* e *Length*. Caso dos elementos de dados compostos por outros Elementos.
- **V:** Só *Value*. Caso dos elementos de dados que não têm *Tag* atribuída em (1), (7), (10) e (19).

Em qualquer dos casos, cada componente (T, L ou V) ocupa uma linha na tabela.

Para cada componente do Elemento de Dados, é indicado:

- **Nome.** De acordo com (1), (4) e (12).
- **Dim (Dimensão).** Dimensão efectiva (em caracteres) com que o Elemento vem no Ficheiro de Personalização. n1-n2 representa um intervalo. n3 n4 representa 2 valores possíveis.
- **Form (Formato). Formato dos dados no Ficheiro PERS:**
 - **ASCII:** representação ASCII do texto.
 - **Binary:** Varia entre "0" e "9", "A" e "F".
 - **H - Hexadecimal:** Varia entre '0' e '9', 'A' e 'F'.
- **Req (Requisito). Presença do elemento na DGL:**
 - **M: Mandatório.** Elemento sempre presente na DGL (quando esta exista).
 - **O: Opcional.** O elemento pode não estar presente na DGL.

Conteúdo. Os valores apresentados nesta coluna devem ser considerados como informativos.

3.2.5.5.4.6 Layout das DGIs - PERS v3

Na tabela seguinte é detalhada a composição de cada uma das possíveis DGIs.

Os elementos de dados que formam as DGIs podem decompor-se em:

- **TLV:** *Tag*, *Length* e *Value* do Elemento. Caso dos elementos de dados simples.
- **TL:** Só *Tag* e *Length*. Caso dos elementos de dados compostos por outros Elementos.
- **V:** Só *Value*. Caso dos elementos de dados que não têm *Tag* atribuída em (1), (7), (10) e (19).

Em qualquer dos casos, cada componente (T, L ou V) ocupa uma linha na tabela.

Para cada componente do Elemento de Dados, é indicado:

- **Nome.** De acordo com (1), (4) e (12).
- **Dim (Dimensão).** Dimensão efectiva (em caracteres) com que o Elemento vem no Ficheiro de Personalização. n1-n2 representa um intervalo. n3 n4 representa 2 valores possíveis.
- **Form (Formato). Formato dos dados no Ficheiro PERS:**
 - **ASCII:** representação ASCII do texto.
 - **Binary:** Varia entre "0" e "9", "A" e "F".
 - **H - Hexadecimal:** Varia entre '0' e '9', 'A' e 'F'.
- **Req (Requisito). Presença do elemento na DGI:**
 - **M: Mandatório.** Elemento sempre presente na DGI (quando esta exista).
 - **O: Opcional.** O elemento pode não estar presente na DGI.

Conteúdo. Os valores apresentados nesta coluna devem ser considerados como informativos.

3.2.6 Registo Final

O registo de finalização do ficheiro contém informação do total de registos que o compõem.

Tabela 332 - Ficheiro PERS - Módulo *Trailer*

MIC	TRL1				
LENGTH	0000008				
Nº	Sigla	Nome	Comp.	Rep.	Obs.
0107	FIC_REGQNT	Número de Registos	8	N	

3.3 Ficheiro PINM

A estrutura do ficheiro PIN segue de perto a estrutura presente nas especificações EMV *Card Personalization Specification* (EMV CPS v1.1 July 2007).

A informação nele contida encontra-se compartimentada por MIC's (*Module Identification Code*) sendo estes divididos por linhas distintas no ficheiro consoante a sua aplicabilidade é relativa à produção no seu todo ou a cada cartão a personalizar.

A informação em cada Módulo é composta por:

- MIC (*Module Identification Code*): Identificador do Módulo.
- MIC *length*: Dimensão dos dados relativos ao Módulo.
- MIC *data*: Conjunto de dados relativos ao Módulo.

Figura 7 - Estrutura do Ficheiro de Emissão de Cartas de PIN – ficheiro PINM

A estrutura do campo MIC é a seguinte:

- Designação do MIC 3 *bytes*; Versão do MIC 1 *byte*; Total 4 *bytes* (a norma prevê de 1 a 7 *bytes*);
- Dimensão do MIC 7 *bytes* (de acordo com a norma);

A estrutura do ficheiro obedece ao seguinte desenho:

- Uma linha (ou registo) de inicialização (*header*);
- Uma linha (ou registo) de parâmetros da produção;
- Uma linha (ou registo) por cada carta de PIN;

- ...
- Uma linha (ou registo) de finalização (*trailer*).

Quadro resumo da estrutura:

Registos	Módulos (MIC)	MIC / Len	Âmbito

Registo Final	Módulo <i>Trailer</i>	TRL1 / 0000013	Produção

3.3.1 Registo Inicial

3.3.1.1 Módulo *Header*

O registo inicial contém informação de controlo, geral para todo o ficheiro. Este é composto pelo módulo HDR.

Tabela 333 - Módulo *Header* - MIC HDR1

3.3.2 Parâmetros da Produção

3.3.2.1 Módulo Parâmetros

O registo de parâmetros é composto por quatro MIC's e contém o *setup* de informação relativa à produção a que este respeita. Este registo inicia-se pelo módulo PAR.

- A) O conteúdo deste atributo define o tamanho do atributo CAR_PRDLFC (6428).
- B) CPLC, Este atributo irá assumir o conteúdo que estiver definido no atributo CAR_LFCLGT (7328).

4 Dicionário de Dados

N.º	Sigla	Nome Campo	Comp.	Rep.	Formato	Descrição	Valores
0061	FIC_SEQN01	Identificação do Ficheiro	11	N	AAAAMMDDSSS	Identificação única atribuída a cada ficheiro. Tem o formato: AAAAMMDDsss em que AAAAMMDD indica a data de produção do ficheiro e sss o número de sequência do ficheiro no dia. O destinatário deverá validar que ainda não processou um ficheiro do mesmo tipo com esta identificação.	
0062	FIC_SEQN01_ULT	Identificação do Ficheiro Anterior	11	N	AAAAMMDDSSS	Identifica o ficheiro do mesmo tipo expedido anteriormente. O controlo da sequencialidade dos ficheiros permite detectar a falta de transmissão de ficheiros ou a sua produção em duplicado. O formato é idêntico ao do campo anterior.	
0064	FIC_VER	Versão do Ficheiro	2	N		Identifica, no header dos ficheiros, a versão do ficheiro indicado no campo (0102) FIC_NOMN01. Permite que possam ser suportados ficheiros com formatos diferentes para o mesmo serviço.	
0101	FIC_APL_ID1	Aplicação	1	A		Trata-se de uma informação presente nos headers dos ficheiros e que identifica a aplicação em que o mesmo se insere. (Valores possíveis constam na TSISATR) (o G - SPGT, foi descontinuado)	B - SEPA DD B2B C - Cheques D - SDD E - Efeitos H - PE_ACH K - Serviços - SIBS Cartões L - GRL-PL M - MULTIBANCO O - GRL-RO P - SEPA CT

N.º	Sigla	Nome Campo	Comp.	Rep.	Formato	Descrição	Valores
							Q - TEI - 1 R - TEI - 2 S - SEPA DD CORE T - GRL-PT V - SVBANK - (não aplicável)
0102	FIC_NOMN01	Nome do Ficheiro	4	A		Identifica o ficheiro em que se insere. Dentro da aplicação é único.	
0111	FIC_REGCOD	Tipo de Registo	1	A		Código que distingue os tipos de registos de um ficheiro ou mensagem. Os restantes tipos são especificados em cada ficheiro ou mensagem.	0 - Registo header de ficheiro; 9 - Registo trailer de ficheiro.
0222	SPI_IDE	Sistema de Pagamento	1	A		Código atribuído ao Sistema de Pagamento considerado. Este campo pode estar preenchido com um espaço quando não tenha aplicabilidade no registo ou mensagem em questão. Os valores M, R, S, T, U, V, X e Z são utilizados no Portal de Serviços SIBS, no âmbito da Gestão de Reclamações - Serviço Acquirer e Serviço Emissor. No âmbito da aplicação de Emissores e Produção de Cartões os valores a considerar são: A; C; S; X.	espaço - sem valor 1 - Acordos Bilaterais 2 - Unicre 3 - American Express 4 - Saving Banks 5 - Gest. Fin. N / Ban. 6 - Gasolinera 7 - TEI 9 - SIBS A - MasterCard B - BPN C - Visa D - Contratos Directos SIBS E - JCB F - Montepio G - CCCAM H - Banif Malta I - ATM Switching K - ASERV (Polónia)

N.º	Sigla	Nome Campo	Comp.	Rep.	Formato	Descrição	Valores
							M - BCP Roménia R - CGD S - SIBS T - BES U - Unicre V - BBPI W - SMS (Single Message) X - AMEX Z - TOTTA
1134	CAR_PRDDAT	Data Produção ou Última Renovação do Cartão	8	N	AAAAMMDD	É a data em que o cartão foi produzido ou que foi renovado no sistema da SIBS.	
3252	FIC_NOMN01_ORI	Ficheiro Original	4	A		Identifica o ficheiro em que se insere. Dentro da aplicação é único (versão do atributo (0102) FIC_NOMN01).	
5326	CAR_IDEPRS	Identificação do Personalizador	3	N		Identificação do personalizador de cartões seleccionado pelo Emissor. A SIBS pode, por delegação do Emissor, enviar o ficheiro directamente para o personalizador escolhido, desde que este esteja identificado no sistema e possua uma chave de transporte própria (ZCMK).	1 – SIBS CARTÕES 2 – Contiforme 3 - SIBS CARTÕES - PIN 4 - INCM 33 - BCP PERS 998 - Personal EXT - PEMV 999 - SIBS CARTÕES - IPER
5512	FIC_REGNUMN02	Sequência do Registo de Emissão	6	N		Número sequencial do registo, informado no ficheiro de emissão de cartões. Conjuntamente com a identificação do ficheiro constituirá uma chave de cartão (não cifrada) que permitira o emparelhamento entre o ficheiro de emissão e o ficheiro de personalização (em que a identificação de cartão se encontra cifrada), nomeadamente para envio de dados adicionais e/ou permitir a reordenação dos registos a personalizar. Nota: Para evitar a geração de ficheiros excessivamente grandes (devido ao nº de	

N.º	Sigla	Nome Campo	Comp.	Rep.	Formato	Descrição	Valores
						aplicações no chip e respectiva criptografia) o nº máximo de registos num ficheiro de emissão não deverá exceder os 2000.	
5850	LOG_REGQNT	Quantidade de Registos de Log	8	N		Este campo indica a quantidade de registos de LOG. É usado, p.e., para indicar a quantidade de registos que fazem parte de um LOTE de registos de LOG.	
6428	CAR_PRDLFC	Cplc - Card Production Life Cycle	142	A		<p>CPLC – <i>Card Production Life Cycle</i>, que caracteriza o ciclo de vida de produção do cartão, desde o fabrico à Personalização.</p> <p>OFFSET - CPLC DATA OBJECT - LENGTH</p> <p>0 - IC Fabricator - 2</p> <p>2 - IC type - 2</p> <p>4 - Operating System Identifier - 2</p> <p>6 - Operating System Release date - 2</p> <p>8 - Operating System Release Level - 2</p> <p>10 - IC Fabrication Date - 2</p> <p>12 - IC Serial Number - 4</p> <p>16 - IC Batch Identifier - 2</p> <p>18 - IC Module Fabricator - 2</p> <p>20 - IC Module Packaging Date - 2</p> <p>22 - ICC Manufacturer - 2</p> <p>24 - IC Embedding Date - 2</p> <p>26 - IC Pre-Personalizer - 2</p> <p>28 - IC Pre-personalization Date - 2</p> <p>30 - IC Pre-personalization Equipment Identifier - 4</p> <p>34 - IC Personalizer - 2</p> <p>36 - IC Personalization Date - 2</p> <p>38 - IC Personalization Equipment Identifier - 4</p>	

N.º	Sigla	Nome Campo	Comp.	Rep.	Formato	Descrição	Valores
6430	CAR_ETRDAT	Data de Entrada	8	N		Data de Entrada do Ficheiro. Formato: AAAAMMDD	
6431	CAR_EXDDAT	Data de Expedição	8	N		Data de expedição do ficheiro: Formato: AAAAMMDD	
6432	CAR_PRDIND	Indicador de Produção de Cartão	1	A		Indicador de Produção do Cartão: 'N' - Não 'S' - Sim	
7327	CAR_TAGLFC	Tag do Cplc - <i>Card Production Life Cycle</i>	4	A		TAG do CPLC. Depende do SPI do chip.	
7328	CAR_LFCLGT	Comprimento do Cplc - <i>Card Production Life Cycle</i>	3	N		Comprimento do CPLC. Depende do SPI do chip.	
7736	CHV_ZCMK_IDTK	ID <i>Zone Control Master Key</i>	12	H		Zone Control Master Key (ZCMK) identifica a chave utilizada para proteger as chaves de transporte (TK - Transport Keys). Esta chave é partilhada entre o Emissor e o Personalizador.	'Fbbbbbbkkkkkkkkkkkavv'
7737	CHV_KSPIN_IDTK	ID Chave Transporte de Pins	12	H		Identifica a chave de transporte (TK -Transport Keys) dos PINs. Esta Chave é utilizada para proteger a confidencialidade dos dados críticos das DGI do MIC Chip ou os restantes MIC dos ficheiros PERS e PINM.	'FFFFFFFF4B5350494E000001'
7738	CHV_KSPIN	Chave de Transporte Do PIN	16	H		Transport Key do PIN. Esta cifra permite cifrar o PIN.	
7739	CHV_KSKEY_IDTK	ID da Chave de Transporte das Chaves 3DES	12	H		Identifica a chave de transporte (TK -Transport Keys) das chaves (Chaves 3DES de cartão e chaves RSA e constantes CRT). Esta Chave é utilizada para proteger a confidencialidade dos dados críticos das DGI do MIC Chip ou os restantes MIC dos ficheiros PERS e PINM	'FFFFFFFF4B534B4559000001'
7740	CHV_KSKEY	Chave de Transporte das Chaves 3DES	16	H		<i>Transport Key</i> das Chaves. Esta cifra permite cifrar as Chaves (Chaves 3DES de cartão e chaves RSA e constantes CRT).	

N.º	Sigla	Nome Campo	Comp.	Rep.	Formato	Descrição	Valores
7741	CHV_KSCIF_IDTK	ID da Chave de Transporte dos Dados Criticos	12	H		Identifica a chave de transporte (TK -Transport Keys) dos dados criticos do cartão (ex. CVV, PAN e data de expiração). Esta Chave é utilizada para proteger a confidencialidade dos dados criticos das DGI do MIC Chip ou os restantes MIC dos ficheiros PERS e PINM	
7742	CHV_KSCIF	Chave de Transporte dos Dados Criticos	16	H		Transport Key das Chaves. Esta cifra permite cifrar os dados criticos do cartão(ex. CVV, PAN e data de expiração).	
7743	CHV_KSMAC_IDTK	ID da Chave de Transporte do Mac	2	H		Identifica a chave de transporte (TK -Transport Keys) do MAC. Esta Chave é utilizada para proteger os dados para integridade dos dados criticos das DGI do MIC Chip ou os restantes MIC dos ficheiros PERS e PINM.	'FFFFFFFF4B534D4143000001'
7744	CHV_KSMAC	Chave de Transporte do MAC					
7745	CHV_FOR_TK	Formato de Protecção das Chaves de Transporte	1	H		Formato da protecção das Transport Keys (TK) que permitem proteger os dados.	
7746	CHV_IDTK	ID da Chave de Transporte	12	H		Identifica a chave de transporte (TK - Transport Keys) que vai cifrar os MIC. Existem TK para protecção da confidencialidade: KSPIN, KSKEY, KSCIF.	KSPIN_IDTK - 'FFFFFFFF4B5350494E000001' KSKEY_IDTK - 'FFFFFFFF4B534B4559000001' KSCIF_IDTK - 'FFFFFFFF4B53434946000001' KSMAC_IDTK - 'FFFFFFFF4B534D4143000001'
7747	CHV_TIP_TK	Tipo de Protecção da Chave de Transporte	1	H		Tipo de protecção da TK (Transport Key).	'20' - General Propose; 'A0' - TK used for MAC encryption.
7748	CHV_CMODE_TK	Algoritmo de Cifra da Chave	1	H		Identifica o algoritmo da cifra da chave.	'11' - ECB; '10' - CBC.
7749	CHV_NUMMIC_TK	Numero de MIC Relacionado com a Chave de Transporte	1	H		Número de MIC que são alvo das TK (Transport Keys).	'00' a '99'.

N.º	Sigla	Nome Campo	Comp.	Rep.	Formato	Descrição	Valores
7750	CHV_MIC_TK	MIC da Chave de Transporte	Var	H		Identificação dos MIC alvo das TK	Dimensão igual ao N.º MIC's x 4 bytes
7752	CHV_MACMIC	MAC do MIC	8	H		Message Authentication Code (MAC) permite proteger os dados para integridade para cada MIC ou DGI. O MAC é calculado através de um algoritmo. O calculo do MAC é realizado ao conteúdo integral do MIC, designação e dimensão do MIC depois do conteúdo estar cifrado.	

Anexo A. Interpretação da Tabela de Combinação de DGIs

Exemplo 1

Para um Cartão *PayPass Maestro* com as seguintes características:

- 2 Aplicações: *Maestro+CAP*;
- *Contact-mode* SDA e *Contactless-mode* DDA;
- Com *Offline* PIN, não Cifrado.

As colunas da Tabela de Combinação de DGIs a seleccionar são neste caso 3:

- M/Chip MasterCard/ *Maestro* (*Contact-Mode*) (SDA);
- *PayPass* / Mchip (*Contactless-Mode*) (CDA);
- CAP.

As DGIs a incluir são as relativas às linhas que tiverem um ✓ assinalado numa destas colunas, ou seja:

Tabela 349 - DGIs a incluir para o exemplo 1
